

## PRESS RELEASE

## FAGOR FU-7814X 8kg TURBO-TIME FREESTANDING WASHING MACHINE

Fagor kitchen appliances are packed with the latest technologies and are very friendly to the environment. Beautifully designed, they are aimed at a mid-market audience who want to showcase affordable luxury in their kitchens. They are easy to use, easy to clean, and all feature a fashionable aesthetic. The 2009 range of built-in and freestanding cooking, cooling and washing products offer the utmost in 'inspired style'.

This large capacity 8kg stainless steel freestanding washing machine is AA-rated for energy and wash performance. With an extra large porthole for easier loading, the machine also features a stylish LCD display. This highlights the electronic clock with 24 hour delayed start option, the wash process plus its duration and function, together with an indication of spin speed. There are 16 wash programmes which includes Quick Wash (15 and 30 minutes), Intensive and special programmes for quilts and duvets plus curtains and bulkier items.

The machine also features 'Turbo-Time'; a UNIQUE washing system developed by Fagor that improves washing results while reducing average washing times by around 30% to just 30 minutes. This innovative concept maintains maximum efficiency and provides the best results in the shortest time using the least amount of energy. A special agitation system and Fagor *patented* sprinkler design ensure a more thorough soaking of clothes using the least amount of water.

With a variable spin speed of up to 1400 rpm, the machine also benefits from ABS (Advanced Balance System), which is the only function to electronically control and distribute clothes evenly within the drum during the spin cycle. This eliminates vibration, reduces noise and increases the durability and longevity of the machine.
